ABHIKALP 2026 | AGENTIC PRODUCT SPRINT | ROUND 1 SOLUTION DOCUMENT

PayMitra

The AI Receivables Officer for India's MSMEs

An agentic workflow that gets small suppliers paid within the legal 45 days: by fixing why invoices get stuck, chasing the right person with the right lever, and financing only what cannot wait.

Fintech | Manufacturing | Supply Chain | Banking & Finance

Contents: ideation funnel > problem validation > solution > agentic architecture > MVP build plan > business model & GTM > impact > risks > validation plan > Round 1 two-slider

Team: [Team name] | Members: [4-5 names] | October 2026 | Figures marked "illustrative" are assumptions.

01 EXECUTIVE SUMMARY

One page: what we are building and why it wins

India's MSMEs were owed an estimated **₹7.34 lakh crore in delayed payments** as of March 2024, equal to over 4.6% of GVA (Delayed Payments 3.0 report, Nov 2025). The law is already on the supplier's side: buyers must pay micro and small enterprises within 45 days (MSMED Act, Sec 15), owe compound interest after that (Sec 16), and since FY 2023-24 lose the income-tax deduction on unpaid MSE dues (Sec 43B(h)). Yet the money still does not move, because getting paid is a **workflow** nobody in a 30-person factory owns.

₹7.34 L Cr
MSME dues stuck in delayed payments (Mar 2024)

2.18 L+
complaints on MSME Samadhaan since 2017; ₹22,363 Cr still pending (Jul 2025)

₹30 L Cr
MSME credit gap (SIDBI, May 2025)

7.3 Cr
Udyam-registered enterprises (Dec 2025)

PayMitra is a team of AI agents that works as the MSME's receivables officer. It reads the books (Tally/Zoho), audits every invoice before the buyer can reject it, finds out *why* a payment is stuck (often a missing PO line or GRN mismatch, not unwillingness), chases the right person through WhatsApp, email and a vernacular voice bot, and climbs a relationship-safe escalation ladder from a friendly reminder to a 43B(h) heads-up to a filing-ready ODR pack. When cash cannot wait, it compares waiting vs TReDS discounting vs overdraft and prepares the cheapest option. The owner stays in control with one-tap WhatsApp approvals.

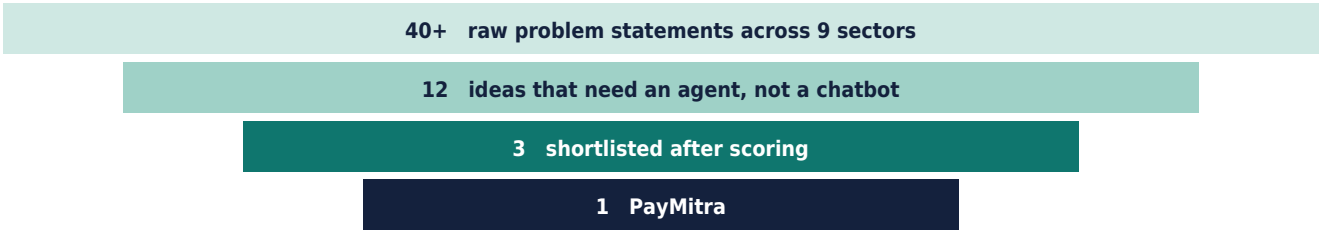

What judges score	How PayMitra answers it
Problem validation	Sized, sourced national problem + a specific root-cause insight (seller-side invoice errors) + a 23-interview validation plan with kill criteria (Section 10).
Business viability & impact	Measurable in rupees: illustrative ₹2.1 Cr-receivables supplier frees ~₹42 lakh and saves ~₹5.9 lakh/yr in interest for a ₹36k/yr subscription. Bank + CA distribution; financing take-rate.
Architecture & workflow	Orchestrator + 6 specialist agents, explicit invoice state machine, tool calls, memory, autonomy levels (Section 5).
MVP functionality & UX	WhatsApp-first; a 5-minute demo that takes one stuck invoice from "on hold" to "paid" end to end (Section 6).
Practical readiness	Every integration exists today (Tally export, GST IRN, Account Aggregator, TReDS, ODR portal); mocked in MVP, real in pilot.

> ***One-line pitch:*** *"The law already says MSMEs must be paid in 45 days. PayMitra is the agent that makes it happen, invoice by invoice, without the owner making a single awkward call."*

02 HOW WE CHOSE THE PROBLEM

Ideation funnel: 12 agentic ideas, scored, one winner

We generated problem statements across all nine sectors in the brief, then kept only those where the solution **must act** (multiple steps, tools, decisions over days) rather than just answer questions, because half the score rewards hands-on agentic building. Each surviving idea was scored 1-5 on five criteria weighted to mirror the jury's 50/50 split.

#	Idea (sector)	Pain & scale	Agentic depth	Demo-able in 2 wks	Business viability	Novelty	Total
1	**MSME receivables agent** (Fintech / Mfg / Banking)	5	5	5	5	4	**24**
2	Hospital cashless-claim agent (Healthcare / Insurance)	5	5	4	4	4	22
3	Supplier PO-expediting & risk agent (Supply chain)	4	5	4	4	3	20
4	Trade-promotion claim reconciliation, FMCG x modern trade	4	4	4	4	4	20
5	Kirana auto-replenishment agent for distributors (FMCG / Retail)	4	4	4	4	3	19
6	Export documentation & compliance agent (MSME exporters)	4	4	3	4	4	19
7	D2C COD / RTO reduction agent (E-commerce)	4	4	5	4	2	19
8	Card dispute & chargeback agent (Banking)	3	4	4	3	3	17
9	Machine-breakdown triage & spares agent (Manufacturing)	4	4	3	3	2	16
10	MSME loan pre-underwriting agent (Banking)	4	3	4	4	1	16
11	Shelf-compliance photo agent (Retail)	3	3	3	3	3	15
12	IT incident triage & runbook agent (IT)	3	4	4	3	1	15

Scores are the team's judgement, used to force trade-offs, not data.

Why #1 beat the strong #2

- **Fits more of the jury.** Receivables touch fintech, banking, manufacturing and supply chain at once; hospital claims speak mainly to healthcare and insurance experts.
- **Policy tailwinds with deadlines.** 43B(h), a mandatory ODR route for new delayed-payment cases (from 15 Oct 2025), GST e-invoicing and Account Aggregator all make this workflow automatable *now*.
- **Rupee-denominated ROI.** Every rupee collected earlier is measurable on day one: no proxy metrics.
- **Safer to demo.** Invoices and emails are easy to synthesise realistically; clinical documents and policy wordings are not, and errors there are costlier.
- **Natural revenue engine.** The agent sees receivables before anyone else, which is the exact moment a lender wants to finance them.

Back-up idea kept warm: "ClaimSathi", an agent that assembles hospital cashless pre-authorisation and discharge packs, pre-checks them against policy rules (room-rent caps, non-payables) and answers insurer queries, aimed at IRDAI's one-hour pre-authorisation and three-hour discharge expectations. Same architecture pattern; we can pivot if Round 1 feedback steers toward healthcare.

03 PROBLEM VALIDATION

The law protects MSMEs. The workflow fails them.

Three layers of the problem, each with evidence:

Layer	Evidence	What it means for the product
Scale	₹7.34 lakh crore delayed (Mar 2024), down from a ₹10.7 lakh crore peak in 2022; micro units face delays up to 3x larger firms (Delayed Payments 3.0).	Huge, persistent, and worst for the smallest firms: the ones with no finance team.
Legal remedies under-used	2.18 lakh+ Samadhaan complaints in 8 years vs 7.3 crore Udyam registrations; ₹22,363 crore still pending (Lok Sabha, Jul 2025). In Telangana ~85 of 800+ ODR cases resolved by Aug 2026.	Owners avoid escalation (fear of losing the buyer, paperwork). Escalation must be prepared automatically and used only as a last, owner-approved step.
Many delays start with the seller	A CFO survey of 10,000 overdue invoices found ~60% of late payments traced to seller-side issues: 49% wrong or missing purchase info, 11% invoices late, misdirected or never sent (TermSync 2013, US; cited by iSPIRT).	The highest-ROI action is often *fixing the invoice*, not sending a reminder. India-specific share is a hypothesis we will test.
Cash cost	MSME credit gap ~₹30 lakh crore; micro firms borrow from informal sources far more than small or medium ones (SIDBI, May 2025).	Every day of delay is financed at the owner's most expensive rate. Smarter financing choice is part of the job.

Primary persona (illustrative)

Rajesh, 46, owner of a precision-components maker

₹12 Cr turnover; 38 staff; Udyam: Small; supplies 3 auto OEMs and ~20 tier-1 buyers. One accountant plus a CA who visits monthly. ₹2.1 Cr receivables, ~40% beyond 45 days. Runs a cash-credit line at ~14%.

"*I know the law. But if I send a notice to my biggest customer, I lose the next order. So I call, they say 'it's in process', and I call again next week.*"

Jobs to be done

- Know exactly who owes what, and why it is stuck
- Get paid without damaging relationships
- Meet payroll and raw-material bills on time
- Spend owner time on sales, not chasing

Secondary users: the accountant (does the work), the buyer's AP clerk (wants clean invoices), the buyer's finance head (wants the 43B(h) deduction), and the lender (wants visibility of receivables).

Today's journey of one invoice: where it breaks

Stage	What happens today	Pain	Who loses
Raise	Invoice made in Tally; PO number typed from memory; PDF emailed to a sales contact	Wrong PO line, wrong billing entity, Udyam status not stated	Seller (silently)
Receive	Buyer's AP never logs it, or portal flags a mismatch	Nobody tells the seller; the clock runs	Both
Due date	Accountant scans the ageing report in Excel once a week	No priority; biggest buyers chased least	Seller
Chase	Owner calls the purchase manager: "it's in process"	Wrong person; no record; awkward	Relationship
Day 45+	Escalation considered, then dropped	Paperwork, fear, no interest computed	Seller
Cash gap	Draws more on the overdraft or an informal lender	Most expensive money	Seller

04 INSIGHTS AND TIMING

Three insights that shape the product, and why now

Insight 1: Delay is a workflow problem before it is a willingness problem.

If many overdue invoices are blocked by fixable documentation issues, the first job of the agent is detective work: find the blocker, fix the paperwork, re-submit. Reminders without a fix just repeat the delay.

Insight 2: The buyer has a reason to pay, if someone tells the right person.

Under 43B(h), a buyer that holds an MSE invoice past 45 days loses the tax deduction for that year until it pays. The AP clerk does not care; the CFO does. Framed as help ("here is the list to clear before day 45 to protect your deduction"), the law becomes a **win-win nudge, not a threat**. That keeps the relationship intact.

Insight 3: The MSME owner is the AR department, and has no tools that act.

Accounting tools record invoices; reminder tools send messages; TReDS finances; ODR litigates. Nobody connects them. An agent that moves one invoice across all of them is the product.

Why this could not be built 3 years ago, and can now

Enabler	Status	What it unlocks
Sec 43B(h), Income-tax Act	Applies from FY 2023-24 to dues to Udyam-registered micro & small manufacturers / service providers	A buyer-side incentive the agent can point to
MSME ODR portal	Live 27 Jun 2025; mandatory for new delayed-payment cases from 15 Oct 2025	Escalation is now digital: the agent can prepare a filing pack
GST e-invoicing (IRN)	Mandatory above ₹5 Cr turnover	Machine-readable, verifiable invoice data
Account Aggregator	Consent-based bank data sharing	Auto-matching of receipts; cash forecasting
TReDS	RXIL alone financed ₹80,500 Cr in FY25; >₹2 lakh Cr cumulative	An existing financing rail to route invoices to
LLMs + WhatsApp + voice	Cheap, multilingual reasoning and channels MSMEs already use	Reads messy replies, drafts in tone, talks in Hindi

Nuance we design for: 43B(h) covers micro and small enterprises (not medium), and not traders. PayMitra checks the supplier's Udyam category and activity before ever using the 43B(h) lever, and falls back to relationship and Sec 15/16 levers otherwise.

05 THE SOLUTION

PayMitra: a receivables officer made of agents

Product principles

- **Fix before you chase.** Every invoice is audited before it leaves and diagnosed when it stalls.
- **Right person, right lever, right time.** AP clerk for status, finance head for 43B(h), owner only when needed.
- **Relationship-safe by design.** Autonomy levels: routine actions run alone; anything a buyer could resent needs a tap from the owner.
- **Cash, not just collections.** The goal is meeting payroll at the lowest cost, so financing is part of the decision.
- **WhatsApp-first.** The owner never has to open a dashboard to use it.

Agentic architecture

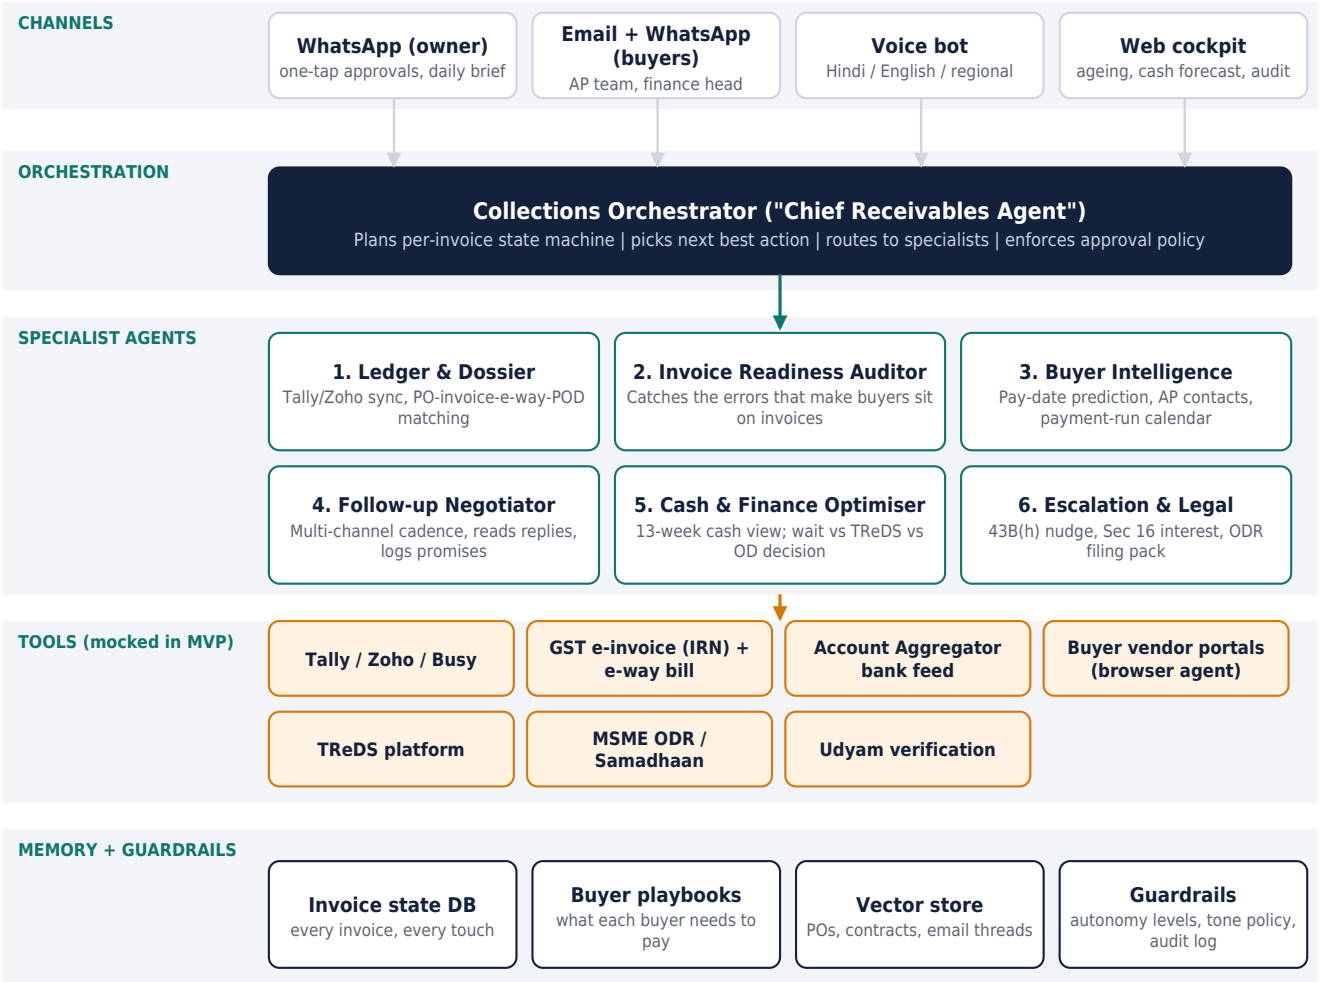

Diagram: one orchestrator plans per invoice and delegates to six specialists that call real-world tools; shared memory and guardrails sit underneath every action.

What each agent does

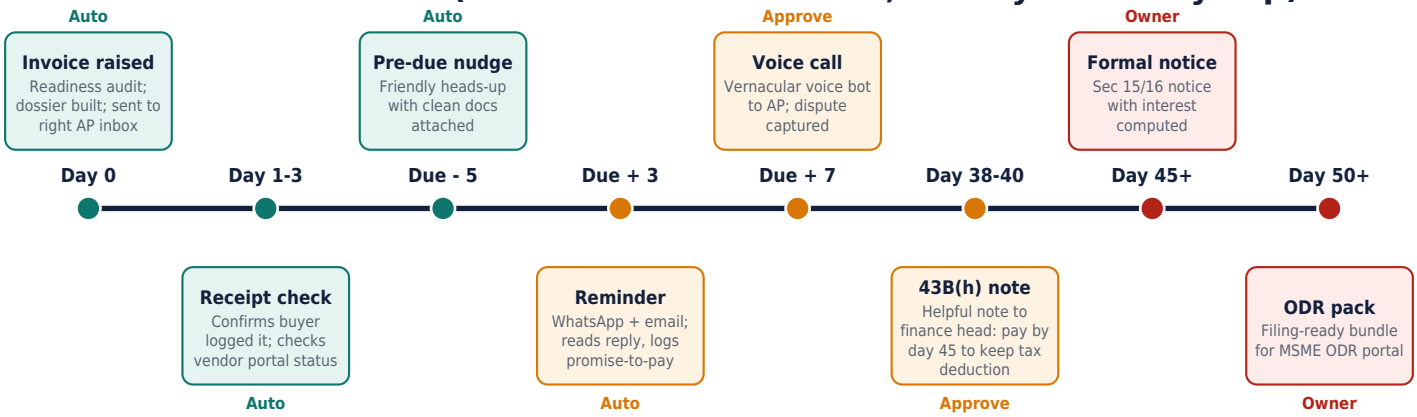

Agent	Goal	Tools it calls	Autonomy
Orchestrator	Keep every invoice moving to "paid"; choose the next best action daily	All agents; state DB; policy engine	Plans; obeys policy
1. Ledger & Dossier	Single truth per invoice: PO, invoice, IRN, e-way bill, POD, GRN	Tally/Zoho export, GST IRN lookup, OCR on POD	Auto
2. Readiness Auditor	Catch rejection reasons before the buyer does	Buyer playbook, rules + LLM checks, invoice template	Auto-flag; fixes need approval
3. Buyer Intelligence	Predict pay date; know AP contacts and payment-run days; read portal status	History model, browser agent on vendor portals, email history	Auto
4. Follow-up Negotiator	Run the cadence; classify replies (promise, dispute, query, silence); act	Email, WhatsApp Business, voice bot, calendar	Auto up to reminders; approval for voice & 43B(h)
5. Cash & Finance Optimiser	Forecast 13 weeks; pick wait / TReDS / OD by cost and risk	AA bank feed, TReDS (mock), rate table	Recommends; owner approves
6. Escalation & Legal	Prepare Sec 15/16 notice and ODR pack with interest computed	Templates, deterministic interest calculator, ODR checklist	Drafts only; owner files

Invoice state machine (what the orchestrator tracks)

```
DRAFT → AUDITED → SENT → ACKNOWLEDGED → DUE → {PROMISED | DISPUTED | SILENT} → {PAID | FIX_AND_RESUBMIT | ESCALATION_READY} → {PAID | FINANCED | ODR_FILED}
```

Each transition writes to the audit log with the evidence used (email ID, portal screenshot, bank credit), so every agent decision is explainable to the owner, the CA, and if needed the facilitation council.

The escalation ladder (relative to invoice date; 45-day statutory cap)

Green = fully automatic, amber = agent proposes and owner approves in WhatsApp, red = owner-initiated. The owner can mark any buyer "sensitive" to slow the ladder.

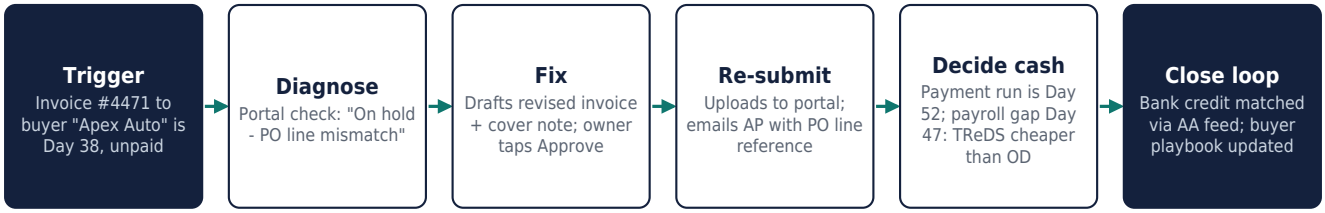

Decision logic for the Cash & Finance Optimiser

For each forecast cash gap: *cost(wait)* = penalty of missing the obligation (payroll, supplier discount lost); *cost(OD)* = amount x OD rate x days; *cost(TReDS)* = discount priced on the buyer's credit, only if the buyer is on TReDS. The agent picks the cheapest option that closes the gap, explains it in one line, and asks for approval. All arithmetic is code, never the LLM.

06 THE HERO WORKFLOW

From "on hold" to "paid": one invoice, end to end

This is the functional agentic workflow our MVP will run live. It is chosen because it shows **diagnosis, tool use, human approval, a financial decision and closure** in under five minutes.

Agent: Orchestrator -> Buyer Intelligence -> Readiness Auditor -> Follow-up Negotiator -> Cash Optimiser -> Ledger

What the owner sees on WhatsApp (mock-up)

PayMitra - Monday 9:00 AM	
Good morning Rajesh. ₹2.10 Cr outstanding. ₹38.4 L is due this week. **3 invoices are stuck for fixable reasons** (₹11.2 L). Apex Auto #4471 (₹6.8 L, day 38) is on hold in their portal: PO line 20 vs our invoice line 10. I have drafted a corrected invoice and a cover note to their AP team. **Approve sending?** [Approve] [Edit] [Hold]	
	Approve
Sent and uploaded to the Apex portal. Their next payment run is on day 52, but your payroll of ₹9 L is on day 47. Options: **TReDS discount ≈ ₹6,200** vs **OD interest ≈ ₹10,400** (illustrative). Recommend TReDS for this one invoice. [Approve] [Wait]	
	Approve TReDS
Done. Also: Sharma Fabricators #4398 is day 41 and unpaid. Shall I send their finance head the 43B(h) reminder? Tone: helpful, no threat. [Preview] [Send] [Skip]	

The 43B(h) note the agent drafts (excerpt)

> "Dear Ms. Iyer, to help your team close the half-year cleanly: the two invoices below from Sharma Fabricators (Udyam: Small, manufacturing) cross 45 days on 24 Oct. Clearing them before then keeps the expense deductible under Section 43B(h). All supporting documents are attached and already match your PO. Happy to help with anything your AP team needs. Regards, Accounts, Sharma Fabricators"

5-minute demo script for the Grand Finale

Time	Scene	What the jury should notice
0:00	Rajesh's problem in 20 seconds; the ₹7.34 L Cr number	Real problem, real person
0:30	Connect a (synthetic) Tally export: 400 invoices, 25 buyers ingested; ageing and risk appear	Agent builds dossiers by itself
1:15	Readiness Auditor blocks a new invoice: missing PO line, Udyam status not printed	Prevention, not just collection
2:00	Hero workflow live: portal "on hold" diagnosed, fix approved on a real phone via WhatsApp	Multi-step tool use + human-in-loop
3:00	A buyer replies in Hinglish: "50% next week, balance after QC". Agent splits the promise, schedules both	Robust reply understanding
3:40	Cash Optimiser: payroll gap; TReDS vs OD maths shown; approval	Financial reasoning, deterministic maths
4:20	Escalation pack for a chronic defaulter generated in ~40s with interest computed	Legal readiness, owner control
4:45	Impact slide: days saved, ₹ freed, hours saved	Business outcome

07 MVP BUILD PLAN

What we will actually build, and how

Scope rule: build one hero workflow that is real end to end, and mock every external system behind an interface that a real integration can replace later.

Layer	MVP choice	Why
Agent framework	LangGraph (Python) for the state machine; n8n as low-code fallback for channels	Explicit states and checkpoints = explainable, judge-friendly
LLM	A frontier model for reasoning + a small model for reply classification	Quality where it matters, cost where it does not
Front end	Streamlit or Lovable web cockpit; WhatsApp via Twilio/Meta sandbox	Fast to build; real phone in the demo
Data	Synthetic: 1 supplier, 25 buyers with distinct payment personas, 18 months, ~400 invoices, POs, GRNs, emails	Allowed by the brief; lets us inject realistic failure modes
Mock integrations	FastAPI mocks: Tally export, GST IRN lookup, vendor portal (a small web app the browser agent navigates), AA bank feed, TReDS, ODR	Same interfaces as the real systems
Deterministic tools	Interest calculator (Sec 16), ageing, cash forecast, TReDS vs OD cost	No LLM arithmetic
Memory	Postgres/SQLite state DB + vector store for POs and threads	Per-buyer playbooks improve over time
Observability	Trace every agent step (LangSmith/Langfuse), audit log in UI	Shows the jury the agent's reasoning

Synthetic data design: failure modes we will plant

- PO line or quantity mismatch; wrong billing GSTIN; missing Udyam number on invoice; invoice sent to sales instead of AP
- Buyer personas: "prompt payer", "monthly payment run", "disputes everything", "silent until escalated", "partial payer"
- Replies in English, Hindi and Hinglish, including ambiguous ones ("will check and revert")

How we will test the agent (evaluation)

Test set	Metric	Target for demo
60 labelled buyer replies	Intent classification accuracy (promise / dispute / query / noise)	≥ 90%
40 seeded invoices with known errors	Readiness Auditor recall	≥ 90%, with < 10% false alarms
Guardrail red-team (20 prompts)	Actions sent without required approval	0
Interest & cost calculations	Match against spreadsheet	100%

Build timeline to the Grand Finale

When	Milestone
Oct 19	Masterclass; lock stack; define state machine and tool interfaces
Oct 20-22	Round 1 two-slider submitted; synthetic data generator; mock APIs
Week 2	Ledger, Auditor and Negotiator agents; WhatsApp loop; reply classifier + eval
Week 3	Buyer portal browser agent; Cash Optimiser; Escalation pack; cockpit UI
Week 4	User tests with 3-5 MSME owners/accountants; polish demo; rehearse; fallback recording

Team split (4-5 members): product & pitch lead; agent/orchestration engineer; integrations & data; UX/WhatsApp; research & validation. Exact dates for later rounds to be set once announced.

08 BUSINESS MODEL AND GO-TO-MARKET

How PayMitra makes money and reaches MSMEs

Target customer and market

- **Beachhead:** Udyam-registered **micro and small manufacturers and service providers** that sell B2B to larger buyers (where 43B(h) applies), starting with auto-component and engineering clusters (e.g., Pune-Chakan, Ludhiana, Coimbatore).
- **Universe:** 7.3 crore Udyam registrations, of which the addressable core is the far smaller set of B2B, GST-filing, invoice-heavy firms. We will size this bottom-up from GST e-invoicing and Udyam category data before Round 2 rather than quote a headline TAM.
- **Value pool:** ₹7.34 lakh crore of delayed dues; even a small share collected earlier, or financed through the platform, is a large revenue base.

Revenue streams

Stream	Who pays	Price (illustrative)	Logic
SaaS subscription	MSME	Free up to 20 invoices/month; ₹1,499 / ₹2,999 / ₹4,999 per month by volume	Freemium removes trial friction; tiers track value
Financing take-rate	TReDS platform / NBFC / bank	~0.25-0.5% of amount financed via PayMitra	We bring pre-verified, low-risk invoices at the moment of need
Bank white-label	Bank (MSME current-account franchise)	Per-active-MSME fee	Bank gets receivables visibility, deposits and lending leads
CA partner programme	CA firm (resells)	Revenue share	CAs manage many MSMEs; PayMitra makes them more productive

Go-to-market

Phase	Channel	Goal
0-6 months	Industry associations in one cluster + 10 CA firms; WhatsApp-led onboarding in 15 minutes	50 paying pilot MSMEs; proof of days-saved
6-18 months	One bank or NBFC partnership (embedded in MSME banking app); Tally marketplace listing	1,000+ MSMEs; financing revenue live
18+ months	Buyer-side product: large corporates use PayMitra to manage 43B(h) compliance across their MSE suppliers	Network effect: both sides on one rail

Unit economics (illustrative, to be validated)

Metric	Assumption	Note
Blended ARPU	~₹3,000/month (₹2,200 SaaS + ₹800 financing)	Financing share grows with usage
Variable cost per MSME	~₹350/month (LLM, WhatsApp, voice, hosting)	Small models for routine steps keep this low
CAC via CA / bank channel	~₹6,000-8,000	Partner-led, not paid ads
Payback	~3 months	If churn stays below 3%/month

09 IMPACT AND MOAT

What changes for the MSME, and why we are hard to copy

ROI for the persona (illustrative)

	Before	With PayMitra (target)
Receivables beyond 45 days	40% of ₹2.1 Cr = ₹84 L	20% = ₹42 L
Cash freed	-	**₹42 L**
Interest saved at 14% cost of funds	-	**≈ ₹5.9 L / year**
Owner + accountant time on chasing	~10 hrs/week (assumed)	~2 hrs/week (approvals only)
PayMitra cost	-	₹36k / year (₹2,999 plan)
Return on subscription	-	**≈ 16x** on interest alone

Calculation: ₹2.1 Cr x (40% - 20%) = ₹42 L; ₹42 L x 14% = ₹5.88 L; ₹5.88 L / ₹0.36 L ≈ 16.

North-star and product KPIs

Level	Metric
North star	**% of invoice value collected within 45 days**
Outcome	DSO; overdue ₹; interest cost avoided; financing cost vs OD baseline
Agent quality	Blocker diagnosis accuracy; reply-intent accuracy; approval acceptance rate; actions reversed by owner
Engagement	Weekly approvals per MSME; time-to-approve; % invoices audited before sending
Relationship health	Buyer complaints / opt-outs; owner "too aggressive" flags (target ≈ 0)

Competitive landscape

Category	What they do well	What they leave open
Accounting software (Tally, Zoho, Busy)	System of record; static reminders	Do not diagnose blockers, talk to buyers, or decide financing
Receivables / reminder apps	Automated reminder sequences	Mostly message-sending; little root-cause fixing or legal & financing loop
TReDS platforms	Low-cost invoice discounting	Only finance; no collection workflow
Samadhaan / ODR portal	Legal remedy	Owner must prepare everything and decide to escalate
CA firms / collection agencies	Human judgement	Expensive, periodic, sometimes relationship-damaging

Our moat grows with use: (1) **buyer playbooks**, a learned map of what each large buyer needs before it pays, shared (anonymised) across all suppliers of that buyer; (2) **payment-behaviour data** that makes pay-date prediction and financing pricing better than anyone else's; (3) **distribution** through banks and CAs. Every new supplier of Apex Auto makes PayMitra better for every other supplier of Apex Auto.

10 RISKS AND VALIDATION

What could go wrong, and how we will find out fast

Risk	Mitigation
Agent damages a key buyer relationship	Autonomy levels; "sensitive buyer" flag; tone policy; owner approval for anything beyond a reminder; full audit log
Hallucinated legal or financial content	Legal text from vetted templates; interest and costs computed by code; LLM only fills context; CA review option
Data privacy (DPDP Act 2023)	Explicit consent, AA framework for bank data, India data residency, least-privilege access, no training on customer data
WhatsApp policy / spam perception	Opt-in templates, business-verified sender, low frequency, buyer opt-out respected
Low digital maturity of owners	WhatsApp + vernacular voice; CA-assisted onboarding; works from a Tally export, no ERP needed
Buyers ignore it anyway	Escalation pack makes the credible next step cheap; ODR is now digital and mandatory for new cases
Vendor portals block automation	Browser agent as assistive (owner's own login, owner-triggered); fall back to email/AP desk

Validation plan before Round 2 (riskiest assumptions first)

Hypothesis	Test	Pass / kill criterion
A large share of overdue MSE invoices are blocked by fixable documentation issues in India too	Review ageing of 3-5 friendly MSMEs (~200 overdue invoices) with their accountants	Pass if ≥ 30% have a fixable blocker; else re-centre on negotiation + financing
Owners will let an agent message buyers if they approve each sensitive step	15 owner interviews + clickable WhatsApp prototype	Pass if ≥ 10/15 would use it on at least one real buyer
Buyer finance teams respond better to a 43B(h) "help" note than to reminders	5 AP / finance-head interviews at large buyers	Pass if majority say it would get prioritised
CAs would distribute it	3 CA firm interviews	Pass if ≥ 2 want a pilot for their clients
Willingness to pay ≥ ₹1,500/month	Van Westendorp pricing questions in owner interviews	Pass if median acceptable price ≥ ₹1,500

Roadmap after the hackathon

- **Pilot (3 months):** 20-50 MSMEs in one cluster, real Tally + email + WhatsApp, TReDS partner sandbox.
- **Scale:** bank partnership, Hindi + 3 regional languages, Zoho/Busy connectors.
- **Network:** buyer-side 43B(h) compliance dashboard for corporates, closing the loop from both ends.

11 ROUND 1 SUBMISSION

Suggested content for the 2-slider

The two slides below compress this document. Keep text large; let the diagram carry slide 2.

Slide 1 | Get MSMEs paid in 45 days, without losing the customer

Problem

- ₹7.34 L Cr owed to MSMEs in delayed payments
- Law says pay in 45 days (MSMED Sec 15; 43B(h)); owners still don't escalate
- Many delays start with fixable invoice errors
- Cash gap is financed at the owner's costliest rate

Persona: Rajesh, ₹12 Cr auto-components maker, ₹84 L stuck beyond 45 days.

Solution: PayMitra

An AI receivables officer on WhatsApp that:

- **Audits** every invoice before the buyer can reject it
- **Diagnoses** why payment is stuck (portal, PO, GRN)
- **Chases** the right person with the right lever, relationship-safe
- **Finances** only what can't wait: TReDS vs OD
- **Escalates** with a ready ODR pack, only on owner approval

Impact: ~₹42 L freed, ~₹5.9 L/yr interest saved, ~16x ROI (illustrative).

Slide 2 | How it works, how it makes money, what we validate next

Agentic architecture

- Orchestrator with invoice state machine
- 6 agents: Ledger, Readiness Auditor, Buyer Intelligence, Negotiator, Cash Optimiser, Escalation
- Tools: Tally, GST IRN, AA bank feed, vendor portals, TReDS, ODR (mocked in MVP)
- Guardrails: autonomy levels, one-tap approvals, deterministic maths, audit log

Hero workflow (live demo): portal "on hold" → fix → approve → resubmit → TReDS decision → paid.

Business model & GTM

- Freemium SaaS ₹1,499-4,999/month
- Financing take-rate on TReDS/NBFC invoices
- Distribution via CAs, associations, then a bank partner
- Moat: buyer playbooks + payment-behaviour data

Validation next: 15 owners, 5 buyer finance heads, 3 CAs, ~200 real overdue invoices.

Why now: 43B(h), mandatory ODR (Oct 2025), e-invoicing, Account Aggregator, multilingual LLMs.

Pitch tips for Round 1

- Lead with the persona's quote, then the ₹7.34 L Cr number. Human first, then scale.
- Say "fix before you chase" early. It is the line that separates PayMitra from reminder apps.
- Show the state machine or the architecture diagram: half the score is agentic building.
- Mark illustrative numbers honestly. Judges trust teams that separate data from assumptions.
